TULIPS

Tulips may be planted from 1st October until January. They should be planted 5 to 6 inches deep and 5 to 6 inches apart. A dressing of bonemeal mixed into the depression after digging is beneficial. The bulbs should be lifted every two or three years or they become crowded and give small flowers. When the old flower stems are turning yellow, the bulbs may be taken up, dried and stored until planting time. Tulips like a place in the sun in a rich loamy, well drained soil.

DARWIN

Darwin Tulips are distinguished by their tall stems and beautiful cup shaped flowers. They bloom during the month of May about the same time as the Cottage and Breeder Tulips.

LAWN GRASSES

The FALL is an ideal time for preparing your lawn and sowing grass seed. This is especially true in the case of shady locations. By sowing the seed in the FALL you give the grass a chance to get started and well rooted when the vitality of the surrounding trees is declining. All the grasses listed below may be sown anytime beginning Sept. 1st.

LOSE'S SURE CROP LAWN GRASS—This grass is a carefully blended mixture of high grade Bluegrass, Red Top, Rye Grass, and Dutch White Clover, designed to give you the best lawn, in the quickest time, and under most weather conditions. Ideal for making a quick, permanent, deep green and velvety lawn. \$1.00 lb., 5 lbs. \$4.75, 10 lbs. \$9.00, 20 lbs. \$17.50.

LOSE'S SURE CROP SHADY LAWN—A carefully blended mixture of grasses especially adapted to growing in shady spots, under trees, or on the shady side of the house. Since trees take a lot of plant food out of the soil it is especially important that you work in at least 4 lbs. of Vigoro, or 6 lbs. of Sheep Manure per 100 sq. ft., and water frequently in the summer. Fall sowing of this seed enables the grass to get a good start while the trees are dormant. \$1.00 lb., 5 lbs. \$4.75, 10 lbs. \$9.00, 20 lbs. \$17.50.

KENTUCKY BLUE GRASS—King of Grasses—Unequalled for making a beautiful thick compact turf when conditions are favorable. Germination is slow, and if quick lawn is desired should be sown along with faster germinating grasses. Blue grass prefers soil of high fertility, so if your ground is poor be sure to use fertilizer or manure. \$1.00 lb., 5 lbs. \$4.75, 10 lbs. \$9.00, 20 lbs. \$17.50.

LOSE'S WINTER GRASS—This mixture of grasses is especially adapted to giving a quick thick, deep green coverage for the winter. It is just as satisfactory for shady locations as open places. 40c lb., 5 lbs. \$1.75, 20 lbs., \$6.50.

RYE GRASS—Unexcelled for rapid growth and immediate effect. Does not make a permanent lawn unless mixed with other grasses. Excellent to give a beautiful green effect all winter. 25c lb., 5 lbs., \$1.15, 20 lbs., \$3.75.

PERENNIAL RYE GRASS—45c lb., 5 lbs. \$2.15, 10 lbs. \$4.00

DUTCH WHITE CLOVER—A perennial clover used extensively for lawns in a mixture. \$1.50 lb.

POA TRIVIALIS—Also known as Rough Stalk Meadow Grass or Blue Grass of the Shade, since it is particularly adapted to shady places. Does not withstand drought as well as Blue Grass, so its ideal location would be a moist shady spot. \$1.15 lb., 5 lbs. \$5.50, 10 lbs. \$10.25.

CREEPING RED FESCUE—Excellent for shade. Thrives on all types of soil, even dry sandy bottom soil. Makes an extremely tight sod of fine needle-like deep green leaves. Is not easily winter-killed and is ideal for use on lawns, golf courses, airports, cemeteries, and playgrounds. \$1.15 lb., 5 lbs. \$5.50, 10 lbs. \$10.25, 20 lbs. \$20.00.

EVERGREENS

Most people have more time in the Fall of the year to do their landscaping and transplanting than in the busy days of Spring. The weather is often in favor of Fall planting. Evergreens and Shrubs do excellently when set out anytime after September 1st. They may be set out successfully as long as the ground isn't frozen.
